ADLAKE

Equipped with
Standard
Bracket

Marker Lamp No. 1158

Fitted with one red and three green
lenses. Standard sizes are 5" and 5 $\frac{3}{8}$ "

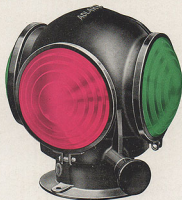

Permanent Satisfaction Assured with this Marker Lamp

The elements have nothing to offer which this Marker lamp cannot repel. It is built to give service through the storms of winter and the heat of summer.

The body is of cast aluminum, light yet rugged. This body is easily removed from the bracket when replacement of bulb is necessary or inspection is required. The lamp is practically moisture-proof. Wiring enters from below the bracket and the sturdy pull-switch in socket is also placed underneath, fully protected from the weather.

Body of lamp turns on bracket making the change from one signal color to the other very simple, and quickly accomplished.

Bracket is made of malleable iron. There is practically nothing about this lamp to wear out except the bulb.

Equipped with Flanged Base

When lamp is equipped with flanged base it is known as No. 1175. The wiring enters from underneath or thru side of base.

In ordering please be sure to specify type of bulb to assure socket being located at proper height.
